Oracle Database 10G Administration: Workshop I – June 28 – July 2, 2010

Oracle Application Express 3.0 Developing Web Applications – Jul 12 – 15, 2010

Oracle Database 11G SQL & PL/SQL Fundamentals – July 26 – 30, 2010

Oracle Database 11G Administration: Workshop I – August 9 – 13, 2010

Oracle Database 11G Administration Workshop II- August 23 - 27, 2010

Oracle Application Express 3.0: Develop Web Applications

This course is designed to introduce the students to Oracle Application Express 3.0. The course covers various Application Express components and wizards to build applications and database objects that are easy to deploy. The students learn how to build forms and reports and incorporate different types of items and shared components. Creating and utilizing various navigation components as well as sessions management and debugging are discussed. In addition, students incorporate access control, and session protection to enforce application security. Once the application is complete, students learn how to define their packaged application and export the application. Students will also use all the Utilities and Report capabilities that Oracle Application Express provides to build a robust application.

Learn to:

- Develop a database-centric Web application using the Application Builder
- Manage Authentication, Authorization and Session State within your Application
- Utilize and manage Shared Components
- Administer Application Express Workspaces
- Manage Database Objects Using SQL Workshop
- Deploy Your Application
